

# Auvé Scholarships Overview

*"I founded my company with strong determination to give back with intent to pay forward the opportunities I worked hard to achieve and was lucky to attain. My goal has been the formulation of a sustainable program for the advancement of science and math, supporting disadvantaged and underrepresented students.*

*I was a chemistry major in college and a MESA scholarship awardee. My brother studied engineering on a MESA scholarship. Our mother volunteered her time and skills to help support and promote MESA's mission.*

*This opportunity to provide current and future students not unlike my own family with scholarships through the same organization that made it possible for my brother and me to attain our educational and professional goals is profoundly moving to me.*

*I am honored to have my company serve among the companies that support MESA, the very organization that helped me to get to where I am today.*

*Angella Sprauve  
Founder, Auvé*

The Auvé-MESA Scholarship Fund is an ongoing program donating 10% of every product sold to individual scholarships for students pursuing the areas of sciences, mathematics, and engineering. These scholarships are awarded nationally through MESA. Criteria for award includes overcoming hardships and academic merit.

MESA nationally supports disadvantaged and underrepresented students to achieve academically in math, science and engineering and go on to attain math-based degrees.

The vision of MESA is to support the national science and mathematics educational agenda by ensuring that MESA students develop a high level of literacy in mathematics and science so they can play a leading role within our increasingly technology-based world.
